Hello Emilio,

Congratulations on the purchase of your new custom computer from Puget Systems! We take great
pride in our work, and we know that you are eagerly awaiting the arrival of your computer. Now that
your assembly is complete, we have taken a few photos of your system and we would like to share
them with you. These pictures are taken as a last step, so your wait is nearly over!

As part of our advanced testing, we use thermal imaging. This process gives us crucial information about your computer's temperatures and helps us to improve the reliability of your computer by optimizing how heat is dissipated. The image on the left shows your computer at idle temperatures. The image on the right shows your computer at full load temperatures.

While this page has been put together for you to give you a first glimpse at your new system, you can also forward it to your friends and family! A full list of hardware is available to share. Don't forget that you can log into your account to view benchmarks, quality control reports, and other information about your new computer.

Your system has passed all of our stability tests, has gone through our extensive burn-in process, and will be shipping out soon via Fedex Express Saver 1-3 days. Once we have tracking information, we will forward it to you in another email. We hope that you've enjoyed your experience with us thus far, and that you are truly satisfied with your new computer. Thank you for your business!

Sincerely,

The Puget Systems Build Team
